

Next Exit

Chemical Safety

THE GAME

"Next Exit Chemical Safety" is an educational project that transforms the main topics of the **Basel, Rotterdam, and Stockholm conventions** into an interactive game and makes it available to schools worldwide. The concept is based on the idea of escape games, where a small group must solve a complex task within a given time frame.

Along with the game, educational material is being developed that provides teachers with a wealth of background information and ideas for further projects.
